This checklist is automatically generated using Version 3.0 of the online database CDF Galapagos Species Checklist.

The Superfamily **Coccoidea** includes small insects that measure between 0.5-8 mm in length and have bodies that can be covered with secretions that form a covering that appears to be a scale. In Galapagos 38 different scale insects have been reported, 9 endemic, 2 native, and 26 introduced, in 7 different families.

The species currently considered endemic or most likely endemic are: *Orthezia galapagoensis*, *Margarodes similis*, *Pseudococcus galapagoensis*, *P. insularis*, *Rhizoecus insularis*, *Eriococcus papillosus*, *Chortinaspis sp.*, *Odonaspis galapagoensis*, and *Velanaspis sp.*

For marine species distribution data cited in the CDF Galapagos Checklists refer to the five main bioregions of the archipelago (Far Northern, Northern, Western, South Eastern and the Elithabeth Bay Bioregion). For the terrestrial species the more than 120 islands, islets and small rocks have been aggregated into Islands Groups, thus, for example, the island group "Santa Cruz" includes smaller islands like Santa Fé, Plaza Norte, Plaza Sur, Baltra, Daphne Mayor, Daphne Minor, and others.

Please be aware that the distribution data presented here is automatically generated from specimen records and does not always accurately reflect the known distribution for all species.

IUCN red-list assessments presented here may deviate from the global IUCN list for the following reasons:

- for well known species groups like vascular plants or vertebrates updates proposed to the IUCN are shown instead of the outdated, but currently accepted status;
- for poorly known species groups (e.g., lichenized fungi) a general assessment is currently not possible and the list presented here is a regional red-list list for Galapagos archipelago.

Names of taxa included in this checklist: 85 (73 Accepted , 11 Unidentified Taxon , 1 Doubtful).

Origin of the taxa included: 52 Accidental, 4 Questionable Native, 5 Endemic, 1 Indigenous, 6 Questionable Endemic.
