Last updated: 28 Jan 2014

Abstract

This Checklist of Galapagos Corals, gorgonians, sea anemones & hydroids includes a total of all 189 taxa reported from the Galapagos Islands.

For each name, detailed information is provided: its Galapagos distribution in islands groups or bioregions generated from the specimen records, comments about the taxonomy (especially synonyms), the origin (native and introduced), taxon status (accepted vs. rejected records) and relevant literature references.

Introduction

This publication lists all species of Galapagos Corals, gorgonians, sea anemones & hydroids currently known.

These exclusively aquatic, relatively simple organisms include **corals**, **gorgonians**, **anemones**, **hydras**, and **medusas**.

They are principally characterized by the presence of tentacles with a venomous substance used to paralyze and capture prey. They can be either sessile, i.e., immobile adults, or free-living, such as medusas.

This group represents species that occur in the Galapagos Marine Reserve and includes 44 corals, 22 of which are endemic or native. For gorgonians and sea fans, 12 species are reported of which 8 are endemic or native to Galapagos.

Methods

This checklist of all known Galapagos Corals, gorgonians, sea anemones & hydroids is automatically generated using the online database of the Charles Darwin Foundation Galapagos Species Checklist.

All CDF Galapagos Species Checklists represent the synthesis of many different records: literature citations, data from previously unpublished reports (grey literature), specimen records of natural history collections located in Galapagos and all over the world. To the best of their knowledge authors of the individual checklists revised all available data. When new information becomes available, the taxonomy of a group changes or new species are discovered, the CDF online database and thus this publication becomes updated.

For many poorly known species groups the higher taxonomic classification still regularly changes according to how our knowledge about species being related changes. In many well known groups the phylogeny is somewhat stable, but to avoid confusion, in particular for groups where taxonomic changes are frequent, all checklists presented here are sorted alphabetical according to genus

name and specific epithet. Please refer to the website for the currently accepted taxonomic hierarchy of each group.

Please be aware that the distribution presented here is automatically generated from specimen records and does not always accurately reflect the known distribution for all species.

For marine species, the distribution generally refers to the five main bioregions of the archipelago (Far Northern, Northern, Western, South Eastern and the Elisabeth Bay Bioregion). For the terrestrial species more than 120 islands, islets and small rocks have been aggregated into Islands Groups, thus, for example, the island group "Santa Cruz" includes smaller islands like Santa Fé, Plaza Norte, Plaza Sur, Baltra, Daphne Mayor, Daphne Minor, and others.

IUCN red-list assessments presented here may deviate from the global IUCN list for the following reasons:

- for well known species groups like vascular plants or vertebrates updates proposed to the IUCN are shown instead of the outdated, but currently accepted status;
- for poorly known species groups (e.g., lichenized fungi) a general assessment is currently not possible and the list presented here is a regional red-list list for Galapagos archipelago.

Numbers of the species included in this list are auto-generated. Adding up the number of species in each category will not always equal the total number indicated. Some species have insufficient data to be categorized while others (e.g., category eradicated) will not be included in the total.

Results

Names of taxa included in this checklist: 189 (153 accepted, 32 unidentified taxon, 3 doubtful, 1 preliminary identification).

Origin of the taxa included: 1 questionable accidental, 14 endemic, 52 indigenous, 6 questionable endemic.

1. *Abylopsis* sp.

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

2. *Acropora crassa* (Milne-Edwards & Haime, 1860)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

Galapagos Distribution: Santa Cruz.

References: Wells, J.W. et al. (1983).

3. *Actinostella bradleyi* (Verrill, 1869)

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Floreana, Santa Cruz.

References: Appeltans, W. et al. (2010), Hickman, C.P. Jr. et al. (2008).

4. *Adelogorgia telones* Bayer, 1979

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

Galapagos Distribution: Santa Cruz.

References: Appeltans, W. et al. (2010), Bayer, F.M. et al. (1979).

5. *Agalma elegans* Sars, 1846
Taxon status: Accepted name; taxon occurs in Galapagos.
Origin: No Data.
Galapagos Distribution: Santa Cruz.
6. *Agalma sp.*
Taxon status: Taxon not identified to species, subspecies, form or variety.
Origin: No Data.
Galapagos Distribution: Santa Cruz.
7. *Aglaophenia diegensis* Torrey, 1904
Taxon status: Accepted name; taxon occurs in Galapagos.
Origin: No Data.
IUCN Red List: Not Evaluated.
Galapagos Distribution: Darwin, Fernandina, Isabela, Santa Cruz.
References: Appeltans, W. et al. (2010), Banks, S. et al. (2009), Calder, D.R. et al. (2003), Hickman, C.P. Jr. et al. (2008).
8. *Aglaophenia praecisa* Fraser, 1938
Taxon status: Accepted name; taxon occurs in Galapagos.
Origin: Native, Indigenous.
Galapagos Distribution: Isabela.
References: Appeltans, W. et al. (2010).
9. *Aglaophenia prominens* Fraser, 1938
Taxon status: Accepted name; taxon occurs in Galapagos.
Origin: No Data.
Galapagos Distribution: Santa Cruz.
References: Appeltans, W. et al. (2010), Calder, D.R. et al. (2003).
10. *Aglaophenia symmetrica* Fraser, 1938
Taxon status: Identification not yet confirmed.
Origin: No Data.
IUCN Red List: Not Evaluated.
Galapagos Distribution: Santa Cruz.
11. *Aiptasia pulchella* Carlgren, 1943
Taxon status: Accepted name; taxon occurs in Galapagos.
Origin: No Data.
IUCN Red List: Not Evaluated.
Galapagos Distribution: Santa Cruz.
References: Appeltans, W. et al. (2010).
12. *Aiptasia sp.*
Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Fernandina, Santa Cruz.

References: Appeltans, W. et al. (2010), Fautin, D.G. et al. (2007), Hickman, C.P. Jr. et al. (2008).

13. *Antennella avalonia* Torrey, 1902

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

References: Appeltans, W. et al. (2010), Calder, D.R. et al. (2003).

14. *Anthopleura dowii* Verrill, 1869

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Santa Cruz.

15. *Anthopleura mariscalii* Daly & Fautin, 2004

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Endemic.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Pinzón, Santa Cruz.

References: Appeltans, W. et al. (2010), Fautin, D.G. et al. (2007), Hickman, C.P. Jr. et al. (2008).

16. *Anthopleura nigrescens* (Verrill, 1928)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: *Anthopleura pacifica* Uchida, 1938

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Santa Cruz, Santiago.

References: Appeltans, W. et al. (2010), Fautin, D.G. et al. (2007), Hickman, C.P. Jr. et al. (2008).

17. *Anthopleura sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

References: Appeltans, W. et al. (2010), Bustamante, R.H. et al. (2002).

18. *Antipathes galapagensis* Deichmann, 1941

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

IUCN Red List: Data Deficient.

Galapagos Distribution: Floreana, Genovesa, Santa Cruz, Santiago.

21. *Atolla* sp.

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

22. *Aulactinia cf. mexicana* (Carlgren, 1951)

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Santa Cruz.

References: Hickman, C.P. Jr. et al. (2008).

23. *Aurelia aurita* Linnaeus, 1758

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

24. *Aurelia* sp.

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

25. *Balanophyllia galapagensis* Vaughan, 1907

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: *Balanophyllia* (*Balanophyllia*) *osburni* Durham and Barnard, 1952

Origin: Native, Indigenous.

Galapagos Distribution: Santa Cruz.

26. *Botruanthus benedeni* (Torrey & Kleeberger, 1909)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Fernandina, Santa Cruz, Santiago.

References: Appeltans, W. et al. (2010), Fautin, D.G. et al. (2007), Hickman, C.P. Jr. et al. (2008).

27. *Bunodactis mexicana* Carlgren, 1951

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

Galapagos Distribution: Santa Cruz.

References: Appeltans, W. et al. (2010), Constant, P. et al. (2007).

28. *Bunodosoma grandis* (Verrill, 1869)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Darwin, Isabela, Santa Cruz.

References: Appeltans, W. et al. (2010), Fautin, D.G. et al. (2007), Hickman, C.P. Jr. et al. (2008).

29. *Calliactis polypus* (Forskål, 1775)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: *Calliactis decorata* (Couthouy in Dana, 1846), *Calliactis miriam* Haddon & Shackleton, 1893

Origin: No Data.

IUCN Red List: Not Evaluated.

Galapagos Distribution: Santa Cruz.

Disclaimer

The Charles Darwin Foundation Galapagos Species Checklist is a continuously updated list of all species currently known from the Galapagos Islands and reflects up-to-date knowledge compiled by scientists of the Charles Darwin Foundation (CDF) in collaboration with experts from around the world. CDF shares this data publicly and invites comments, corrections and additions.

Please do not hesitate to contact us; your input is very welcome. However, please understand that additions, changes, and corrections will be posted at periodic intervals after thorough cross-referencing of all new data. As an independent international scientific organization, the Charles Darwin Foundation relies on funding from donors who support our work. Please contact us at datazone@fcdarwin.org.ec if you would like to support the Charles Darwin Foundation Galapagos Species Checklist and help make knowledge of Galapagos biodiversity more widely available.
