Last updated: 21 May 2014

Abstract

This Checklist of Galapagos Introduced Invertebrates includes a total of all 762 taxa reported from the Galapagos Islands. For each name, detailed information is provided: its Galapagos distribution in islands groups or bioregions generated from the specimen records, comments about the taxonomy (especially synonyms), the origin (native and introduced), taxon status (accepted vs. rejected records) and relevant literature references.

Introduction

This publication lists all species of Galapagos Introduced Invertebrates currently known.

This list of invertebrate species introduced to the Galapagos includes only species that did not arrive here by natural dispersal mechanisms such as wind, water, or animals that made their own way to the Galapagos. Instead, these invertebrates were brought to the archipelago as a result of human activity and mostly inadvertently in comestibles (vegetables and fruit), construction material, and as hitchhikers on the planes and boats.

Only very few invertebrates were actually introduced on purpose. An example is the recent introduction of the Giant African Snail (*Achatina fulica*), a species brought to Galapagos in the erroneous belief that it could be commercialized as an ingredient of beauty creams.

This checklist of introduced invertebrates includes records from inventories carried out in the inhabited areas of the islands of Santa Cruz, San Cristóbal, Isabela, Floreana, and Baltra, but also includes records from National Park areas on these islands and other islands in the archipelago. The list includes a taxonomically rather heterogeneous group such as insects, spiders, mollusks, crustaceans and other organisms which do not have a spinal column.

Among the worst invertebrate invaders of Galapagos are species like *Wasmannia auropunctata* (little red fire ant), *Solenopsis geminata* (tropical fire ant), *Brachygastra lecheguana* (black paper wasp), *Polistes versicolor* (paper wasp), and *Philornis downsi* (a parasitic fly that causes mortality in nestlings of Darwin's finches and other Galapagos birds).

The ecological impact of most introduced invertebrates is still largely unknown and much research is needed to understand their effects. The presence of new introduced insects often goes unnoticed unless they are found in high numbers or damage large organisms such as vertebrates and plants.

Once they arrive in Galapagos, introduced invertebrates are extremely difficult to control and they are almost always impossible to eradicate. This is because they are small, are found in large numbers, and disperse easily.

Invertebrates are being controlled using toxic baits (such as the fire ants), traps, or classical biological control – the introduction of a natural enemy from the country of origin of the invasive species. Years of studies are necessary to make sure that a natural enemy will not inadvertently affect native species. Until this day biological control has therefore only once been carried out in Galapagos.

In 2002, the Galapagos National Park approved the introduction of *Rodolia cardinalis*, the vedalia ladybug, for the biological control of the invasive cottony cushion scale, *Icerya purchasi*. This program has been extremely successful. Population levels of *Icerya purchasi* have dropped drastically and no native invertebrate species have been affected. This is the only time that an invertebrate has been intentionally introduced with the aim of helping conserve the Galapagos ecosystems.

Methods

This checklist of all known Galapagos Introduced Invertebrates is automatically generated using the online database of the Charles Darwin Foundation Galapagos Species Checklist.

All CDF Galapagos Species Checklists represent the synthesis of many different records: literature citations, data from previously unpublished reports (grey literature), specimen records of natural history collections located in Galapagos and all over the world. To the best of their knowledge authors of the individual checklists revised all available data. When new information becomes available, the taxonomy of a group changes or new species are discovered, the CDF online database and thus this publication becomes updated.

For many poorly known species groups the higher taxonomic classification still regularly changes according to how our knowledge about species being related changes. In many well known groups the phylogeny is somewhat stable, but to avoid confusion, in particular for groups where taxonomic changes are frequent, all checklists presented here are sorted alphabetical according to genus name and specific epithet. Please refer to the website for the currently accepted taxonomic hierarchy of each group.

Please be aware that the distribution presented here is automatically generated from specimen records and does not always accurately reflect the known distribution for all species.

For marine species, the distribution generally refers to the five main bioregions of the archipelago (Far Northern, Northern, Western, South Eastern and the Elisabeth Bay Bioregion). For the terrestrial species more than 120 islands, islets and small rocks have been aggregated into Islands Groups, thus, for example, the island group "Santa Cruz" includes smaller islands like Santa Fé, Plaza Norte, Plaza Sur, Baltra, Daphne Mayor, Daphne Minor, and others.

IUCN red-list assessments presented here may deviate from the global IUCN list for the following reasons:

- for well known species groups like vascular plants or vertebrates updates proposed to the IUCN are shown instead of the outdated, but currently accepted status;
- for poorly known species groups (e.g., lichenized fungi) a general assessment is currently not possible and the list presented here is a regional red-list list for Galapagos archipelago.

Numbers of the species included in this list are auto-generated. Adding up the number of species in each category will not always equal the total number indicated. Some species have insufficient data to be categorized while others (e.g., category eradicated) will not be included in the total.

Results

Names of taxa included in this checklist: 762 (651 accepted, 82 unidentified taxon, 22 doubtful, 2 preliminary identification, 1 problematic, 1 new to science), 3 rejected.

Origin of the taxa included: 453 accidental, 7 cultivated, 2 eradicated, 107 questionable accidental, 152 questionable native, 4 endemic, 30 indigenous, 1 questionable endemic.

1. *Acanthoscelides obtectus* (Say, 1831)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Isabela, Santa Cruz.

References: Kingsolver, J.M. et al. (2001), Peck, S.B. et al. (1998), Peck, S.B. et al. (1996), Peck, S.B. et al. (2006).

2. *Achaearanea dromedariformis* (Roewer, 1942)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Fernandina, Pinta, Santa Cruz.

References: Baert, L.L. et al. (2000), Baert, L.L. et al. (2008).

3. *Achaearanea orana* Levi, 1963

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Santa Cruz.

References: Baert, L.L. et al. (2000), Baert, L.L. et al. (2008).

4. *Acrolepiopsis jaspidea* (Meyrick, 1919)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Roque-Albelo, L. et al. (2006).

5. *Acrosternum ubicum* Rolston, 1983

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Española, Floreana, Isabela, San Cristóbal, Santa Cruz, Santiago.

References: Froeschner, R.C. et al. (1985), Peck, S.B. et al. (2001).

6. *Acrosternum viridans* (Stål, 1859)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Fernandina, Floreana, Isabela, Pinta, Pinzón, San Cristóbal, Santa Cruz, Santiago.

References: Barber, H.G et al. (1924), Froeschner, R.C. et al. (1968), Linsley, E.G. et al. (1966), Peck, S.B. et al. (2001).

7. *Acrotrichis discolouroides* Johnson, 1969

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Isabela, Pinta, San Cristóbal, Santa Cruz.

References: Franz, H. et al. (1985), Johnson, C. et al. (1982), Peck, S.B. et al. (1998), Peck, S.B. et al. (1996), Peck, S.B. et al. (2006).

8. *Aculomicrus sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Three neotropical species are known (Smetana 1975).

Origin: Introduced, Questionable Native.

Galapagos Distribution: Isabela, Santa Cruz.

References: Peck, S.B. et al. (1998), Peck, S.B. et al. (1993), Peck, S.B. et al. (1996), Peck, S.B. et al. (2006).

9. *Acupalpus sp. 1*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Santa Cruz.

References: Desender, K. et al. (2001), Peck, S.B. et al. (2006).

10. *Acupalpus sp. 2*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Santa Cruz, Santiago.

References: Peck, S.B. et al. (2006).

11. *Acyrtosiphon bidenticola* C.F. Smith, 1960

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Fernandina, Santa Cruz.

References: Peck, S.B. et al. (1998), Peck, S.B. et al. (2001).

12. *Adelomyrmex myops* (Wheeler, 1910)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela.

References: Causton, C.E. et al. (2008), Herrera, H.W. et al. (2008).

13. *Adistemia watsoni* (Wollaston, 1871)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Isabela, Santa Cruz.

References: Peck, S.B. et al. (1998), Peck, S.B. et al. (1990), Peck, S.B. et al. (2006).

14. *Adraneothrips sp. (pale species)*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Santa Cruz, Santiago.

References: Peck, S.B. et al. (2001).

15. *Adraneothrips tibialis* (Hood, 1914)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Santa Cruz.

References: Hoddle, M.S. et al. (2011), Peck, S.B. et al. (2001).

16. *Aedes aegypti* Linnaeus 1762

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

17. *Agallia sp. A*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Accidental.

Galapagos Distribution: Fernandina, Floreana, Isabela, Santa Cruz, Santiago.

References: Peck, S.B. et al. (2001).

18. *Agallia sp. B*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Accidental.

Galapagos Distribution: San Cristóbal, Santa Cruz.

References: Peck, S.B. et al. (2001).

19. *Agathodes designalis* Guenée, 1854

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, Santa Cruz, Santiago.

References: Peck, S.B. et al. (1998), Roque-Albelo, L. et al. (2006).

20. *Ahasverus excisus* (Reitter, 1876)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Peck, S.B. et al. (2006).

21. *Alcaeorrhynchus grandis* (Dallas, 1851)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Española, San Cristóbal.

References: Linsley, E.G. et al. (1966), Peck, S.B. et al. (1998), Peck, S.B. et al. (2001).

22. *Alcaeorrhynchus sp. 2*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Isabela, Santa Cruz.

References: Peck, S.B. et al. (2001).

23. *Aleurothrixus floccosus* (Maskell, 1896)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, Santa Cruz, Santiago.

References: Causton, C.E. et al. (2008), Peck, S.B. et al. (2001).

24. *Aleurotrachelus trachoides* Back, 1912

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

25. *Alfoa sodalis* (White, 1878)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Santa Cruz.

42. *Ancholaemus acuminatus* Fairmaire, 1904

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Causton, C.E. et al. (2008), Peck, S.B. et al. (2006).

43. *Ancylostomia stercorea* (Zeller, 1848)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Genovesa, Isabela, Pinta, Santa Cruz, Santiago.

References: Landry, B. et al. (1998), Peck, S.B. et al. (1998), Roque-Albelo, L. et al. (2006).

44. *Anisolabis maritima* (Bonelli, 1832)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, San Cristóbal, Santiago.

References: Linsley, E.G. et al. (1977), Peck, S.B. et al. (1996), Peck, S.B. et al. (2001).

45. *Anotylus sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Accidental.

Galapagos Distribution: San Cristóbal, Santa Cruz.

References: Peck, S.B. et al. (2006).

46. *Anthidium vigintiduopunctatum* Friese

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Unknown.

References: Gonzalez, V.H. et al. (2009).

47. *Anurida maritima* (Guérin-Méneville, 1836)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Marchena.

References: Linsley, E.G. et al. (1966), Peck, S.B. et al. (2001), Stach, J. et al. (1932).

48. *Aonidiella aurantii* (Maskell, 1879)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

58. *Archipsocus spinosus* Thornton, Lee & Chui, 1972

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Isabela, Pinta, San Cristóbal, Santa Cruz, Santa Fé.

References: Linsley, E.G. et al. (1977), Peck, S.B. et al. (1998), Peck, S.B. et al. (2001), Thornton, I.W.B. et al. (1973).

59. *Arhyssus sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, Marchena, Pinzón, San Cristóbal, Santa Cruz.

References: Peck, S.B. et al. (2001).

60. *Ariotus sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Santa Cruz, Santiago.

References: Peck, S.B. et al. (2006).

61. *Arlesia albipes* (Folsom, 1927)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Najt, J. et al. (1991), Peck, S.B. et al. (2001).

62. *Asciodes gordialis* (Guenée, 1854)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Darwin, Fernandina, Isabela, Marchena, Pinta, Santa Cruz, Santiago, Wolf.

References: Linsley, E.G. et al. (1966), Peck, S.B. et al. (1998), Roque-Albelo, L. et al. (2006).

63. *Asciodes quietalis* Walker 1859

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

64. *Asiomorpha coarctata* (De Saussure, 1860)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Isabela, San Cristóbal, Santa Cruz.

References: Peck, S.B. et al. (1990), Peck, S.B. et al. (2000), Shear, W.A. et al. (1987).

65. *Aspidiella hartii* (Cockerell, 1895)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: No Data.

Galapagos Distribution: Santa Cruz.

References: Lincango, M.P. et al. (2008), Lincango, P. et al. (2010).

66. *Aspidiotus aff. pacificus* (Williams & Watson, 1990)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Lincango, M.P. et al. (2008), Lincango, P. et al. (2010).

67. *Aspidiotus destructor* Signoret, 1869

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

368. *Incisitermes pacificus* (Banks, 1901)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: *Incisitermes galapagoensis*, I. *immigrans*. Peck (1996): "Light (1935) states that this species should be considered as a senior synonym of *I. tabogae* Snyder, 1924, but Nickle & Collins 1992 use *I. tabogae* as a valid species. *I galapagoensis* is a supposed endemic species from Islas Wolf and Genovesa. This species cannot be recognized by the descriptions. Cotypes are in the USNM, but Constantino (1998) states that the holotype adult was in CASC, and was destroyed. The distribution of *I. immigrans* is supposed to be Central Pacific Islands, (Hawaii, Marquesas, Fanning, Jarvis), El Salvador, Panama, and Peru; and widespread in the Galápagos. Light (1935) gives characters of soldiers to separate *I. immigrans* from *I. tabogae* (= *I. pacificus*), but I find both "species" of soldiers in the same colony. I have listed above all island records of *Incisitermes* as *I pacificus*, since it is the oldest available name for the Galápagos. My specimens are deposited in the USNM, and these may help solve the questions about the correct application of these names."

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Isabela, San Cristóbal.

741. *Xestocephalus desertorum* (Berg, 1879)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Fernandina, Floreana, Isabela, Marchena, Pinta, San Cristóbal, Santa Cruz, Santiago.

References: Peck, S.B. et al. (1998), Peck, S.B. et al. (1996), Peck, S.B. et al. (2001).

742. *Xyleborinus gracilis* (Eichhoff, 1868)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: Xyleborus gracilis Eichhoff, 1868, fide Peck (2006)

Origin: Introduced, Accidental.

Galapagos Distribution: Floreana, Santa Cruz.

References: Bright, D.E. et al. (1998), Linsley, E.G. et al. (1977), Peck, S.B. et al. (2006).

743. *Xyleborinus saxeseni* (Ratzeburg, 1837)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, San Cristóbal, Santa Cruz, Santiago.

References: Bright, D.E. et al. (1998), Peck, S.B. et al. (2006).

744. *Xyleborus affinis* Eichhoff, 1867

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, Pinta, San Cristóbal, Santa Cruz, Santiago.

References: Bright, D.E. et al. (1998), Linsley, E.G. et al. (1977), Peck, S.B. et al. (2006).

745. *Xyleborus ferrugineus* (Fabricius, 1801)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, Marchena, Pinta, San Cristóbal, Santa Cruz, Santiago.

746. *Xyleborus spinulosus* (Blandford, 1898)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: Xyleborus artespinulosus Schedl, 1935, fide Peck (2006)

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, Pinta, San Cristóbal, Santa Cruz, Santiago.

References: Bright, D.E. et al. (1998), Linsley, E.G. et al. (1977), Peck, S.B. et al. (1996), Peck, S.B. et al. (2006).

747. *Xylesthia pruniramiella* Clemens, 1859

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Genovesa, Isabela, Marchena, Pinta, Santa Cruz, Santiago.

References: Linsley, E.G. et al. (1966), Meyrick, E. et al. (1926), Peck, S.B. et al. (1998), Peck, S.B. et al. (1996), Roque-Albelo, L. et al. (2006).

748. *Xylocoris sp.*

Taxon status: Taxon not identified to species, subspecies, form or variety.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Santa Cruz.

References: Peck, S.B. et al. (2001).

749. *Xylosandrus morigerus* (Blandford, 1894)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Bright, D.E. et al. (1998), Causton, C.E. et al. (2008), Peck, S.B. et al. (2006).

750. *Zabrotes subfasciatus* (Bohemian, 1833)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, Santa Cruz.

751. *Zaprionus sp.*

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

B. Sinclair: This species was first recorded on the basis of a single specimen collected in a McPhail trap at Puerto Ayora in Jan. 2006. It has since not been found again.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Causton, C.E. et al. (2008).

752. *Zelotes laetus* (O.P.-Cambridge, 1872)

Taxon status: Accepted name; taxon occurs in Galapagos.

Syn.: *Zelotes reformans*, fide Baert et al. (2008)

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Isabela, Marchena, Santa Cruz.

References: Baert, L.L. et al. (2008).

753. *Zelotes reformans* Chamberlin, 1924

Taxon status: Accepted name; taxon occurs in Galapagos.

Acc. name: *Zelotes laetus*, fide Baert et al. (2008)

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, Marchena.

References: Baert, L.L. et al. (2000).

754. *Zeros fenestralis* (Cresson, 1918)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Questionable Accidental.

Galapagos Distribution: Santa Cruz.

References: Linsley, E.G. et al. (1977), Mathis, W.N. et al. (1995), Sinclair, B.J. et al. (2005), Wirth, W.W. et al. (1969).

755. *Zeros flavipes* (Williston, 1896)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Native, Indigenous.

Galapagos Distribution: Santa Cruz.

References: Mathis, W.N. et al. (1995), Sinclair, B.J. et al. (2005).

756. *Zeuctostyla vidrierata* (Dognin, 1893)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Roque-Albelo, L. et al. (2006).

757. *Zosis geniculatus* (Olivier, 1789)

Taxon status: Accepted name; taxon occurs in Galapagos.

Origin: Introduced, Accidental.

Galapagos Distribution: Isabela, Santa Cruz.

References: Baert, L.L. et al. (1986), Baert, L.L. et al. (2000), Baert, L.L. et al. (2008), Baert, L.L. et al. (1989), Baert, L.L. et al. (1989), Peck, S.B. et al. (1986).

758. *cf. Aleyrodes* sp.

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

Origin: Introduced, Accidental.

Galapagos Distribution: Santa Cruz.

References: Peck, S.B. et al. (1998).

759. *cf. Corylophodes* sp.

Taxon status: The identification of this taxon or its occurrence in Galapagos is doubtful.

Origin: Introduced, Questionable Native.

Galapagos Distribution: Floreana, Isabela, San Cristóbal, Santa Cruz.

References: Peck, S.B. et al. (1993), Peck, S.B. et al. (2006).

Rejected taxa

1. *Aspidiotus smilacis* Kuwana, 1902

Melanaspis smilacis (Comstock) (Family Diaspididae) is the valid name BUT Aspidiotus smilacis, cited by Kuwana (1902:32), is a misidentification of Melanaspis odontoglossi, discovered by Borchsenius (1966: 350)

2. *Limonia stigmatica* auct.

B. Sinclair: Misidentification; synonym of Geranomyia tibialis.

3. *Trogoxylon parallelopipedum* (Melsheimer, 1844)

In Peck (2006) as Trogoxylon sp.

Disclaimer

The Charles Darwin Foundation Galapagos Species Checklist is a continuously updated list of all species currently known from the Galapagos Islands and reflects up-to-date knowledge compiled by scientists of the Charles Darwin Foundation (CDF) in collaboration with experts from around the world. CDF shares this data publicly and invites comments, corrections and additions.

Please do not hesitate to contact us; your input is very welcome. However, please understand that additions, changes, and corrections will be posted at periodic intervals after thorough cross-referencing of all new data. As an independent international scientific organization, the Charles Darwin Foundation relies on funding from donors who support our work. Please contact us at datazone@fcdarwin.org.ec if you would like to support the Charles Darwin Foundation Galapagos Species Checklist and help make knowledge of Galapagos biodiversity more widely available.
